Abstract (en)  
[origin: EP0477721A2] A foam profile for covering the junction region between wall and ceiling or wall and floor of a room is provided, which possesses at the rear a retaining profile (7, 8) into which the tongues (9, 10) of mountings (1) engage. The mountings 1 fixed in the wall-ceiling junction region thus carry the profile (2), the arrangement according to the invention of profile (2) and mountings (1) also being able to form the border of a suspended ceiling to the walls and at the same time assume supporting functions for the edge ceiling elements of the suspended ceiling. The suspended ceiling can be a coffered ceiling, the coffer frames of which are formed from the profiles (2). The corners, formed in each case by two profiles, of a coffer frame are held together by angle mountings or spring clasps. <IMAGE>
