Abstract (en)  
[origin: EP0477955A2] Louvre window with thermally insulated frame parts each comprising an outer and an inner aluminium extruded section (24, 26) which are interconnected by means of thermally insulating plastics webs (28, 30). One plastics web forms the central part of the side wall of the frame side parts (18) which faces the blade holders (22). The extruded sections (24, 26) of at least the side parts have at the sides facing the blade holders (22), and also at a distance from said sides, strip-like projections (34) which each have a weakened foot forming a bending point and form a side wall of a groove (32) for receiving one end of a web (28, 30). The projections furthermore form together with opposite projections of one web (28) T-grooves (40) for receiving brush-shaped sealing strips (42). <IMAGE>
