Abstract (en)

This invention relates to a device for dishwasher door (10). The door is turnable about a mainly horizontal axis (11) from a vertical closed position via a partly open position to a mainly horizontal open position and vice versa. In the closed position the door (10) covers the opening of a tub (12) in which the dish is placed. The door is influenced by means (17) counteracting the movement of the door from the partly closed to the open position. During the last part of the opening movement to the completely open position the door (10) is also influenced by a movement damping means (24).
