Abstract (en)

[origin: EP0478534A2] The invention relates to a multipurpose processing device for the metered application or removal of liquids and/or free-flowing substances with an axially movable, circumferentially mounted or circumferentially held working roller (3) which is pressed against a corresponding roller or against a corresponding surface (not via its axle and not via the axle pins, respectively) and which, apart from in the circumferential or outer case region which brings about the transfer process, rests with pressure acting on it (presses) against at least two further surfaces which can each be an elastic plate or plates (10) or a counterpressure slide plate or plates or drum or drums or roller or rollers or cylindrical bodies or one or more brush strips which are identical in function to said or plates and which carry out a function which determines or is involved in determining the amount of fluid or free-flowing substance, which is to be applied or removed, on the working roller (3), as a result of which the amount of fluid or free-flowing substance to be applied to or by or removed from or taken out of the material web or the web-shaped material is also determined indirectly, that is to say as a consequent effect. <IMAGE>
