Abstract (en)

[origin: WO9100225A1] A container, in particular for free-flowing products, has a body (2), a base (3) connected to one side of the body, a lid (4) connected to the other side of the body, a withdrawal opening and a closure element in the form of a slide. The container is easy to handle and childproof, because the closure element (17) has at least two catches (18, 19) which, although located at a distance apart, can nevertheless be gripped by the fingers of one hand, are effective when the slide (12) is in the closed position, and can be released simultaneously by only two fingers.
