Abstract (en)
In an electrodynamic loudspeaker, the oscillation coil is formed from an insulating material film provided with conductor tracks, the coil windings consisting of conductor tracks of the previously planar film, arranged parallel, and whose starts and ends are connected to one another, as a result of which a hollow-cylindrical coil is formed. <IMAGE>

Abstract (de)
Bei einem elektrodynamischen Lautsprecher wird die Schwingenspule (104) aus einer mit Leiterbahnen (107) versehenen Isolierstoffolie (106) gebildet, wobei die Spulenwindungen aus parallel angeordneten Leiterbahnen der zuvor planen Folie bestehen, deren Anfänge und Enden miteinander verbunden sind, wodurch eine hohlzylinderförmige Spule (104) gebildet wird. <IMAGE>
