Abstract (en)
[origin: EP0479216A1] Heating device with a burner with a gas mixture forming pipe which has a gas supply pipe which is provided with a gas nozzle, projects into the gas mixture forming pipe through an air inlet of the same and in which there is arranged a pressure measuring point for detecting the mixture pressure, which is connected to a gas valve via a measuring duct. In order to make possible simple construction in such a heating device, it is envisaged that the measuring duct (7) is arranged on the gas supply pipe (6) or is integrated therein and runs parallel thereto.
