Abstract (en)

[origin: EP0479220A2] The invention proposes a method and an arrangement for transporting and bending rod-shaped materials (13). The rod-shaped material (13) is fed to the bending device (14) from a cutting device (18), for example, via a conveyor (16) serving as a buffer. The bending device has two movable carriages, each of which has a driving roller which is designed to be displaceable perpendicularly to the path of the carriages and, for its part, can be assigned alternatively to either of two bending rolls arranged in a fixed manner in the bending carriage. <IMAGE>
