Abstract (en)

[origin: EP0479641A1] The shelter for snow-making systems consists of a monobloc casing made of material of polyethylene type, obtained by rotational moulding. This casing is prefabricated and it comprises, on its lower part, means of positioning and of direct anchoring on the water and air pipes serving to feed the snow guns. <??>The bottom (1) of the casing comprises grooves (2, 4 and 5) which make possible the positioning and the centring of the casing on the water and air pipes. It also comprises a belt (9) provided with buckles (12) serving for stowing straps (13 and 14) which carry out the connection between the shelter and the water and air pipes. <IMAGE>
