Abstract (en)

[origin: EP0480146A2] In the case of an electromagnetic actuator for motor vehicles with a tractive electromagnet and with a lifting armature, a housing is provided for protecting the actuator from environmental influences such as moisture and dust, which housing completely encloses the tractive electromagnet and partially encloses the lifting armature. A seal is also provided between the housing and the lifting armature. A ventilation aperture is provided on the housing and is connected in a flow-conducting manner to a duct, which connects the ventilation aperture to the surrounding air. <IMAGE>
