Abstract (en)
[origin: EP0480464A1] The invention relates to a floor stripping device having an undercarriage (1), which can be moved on the floor, a motor (2), which is arranged on the undercarriage (1), and at least one cutting device which is driven by the motor (2) and is effective in an operating surface dropping into the surface of the floor. It is distinguished by the fact that the cutting device has at least one knife (6) which is rotatable about an essentially vertical axis, and that the knife is constructed and arranged in such a way that its cutting edge lies in the said operating surface and assumes an angle smaller than 30 DEG relative to the tangent of the circular movement, the end of the cutting edge which is leading in terms of movement lying on a smaller radius than the end which is trailing in terms of movement. <IMAGE>
