Abstract (en)

[origin: EP0480505A1] This transmission system includes a plurality of subscriber devices tied to at least two transmission-reception stations (STM1, STM2) exchanging information by means of a time-division multiplex in which there are provided series of T traffic time intervals to be assigned to a variable number C of channels depending on the number and type of subscriber devices to be connected. This system is notable in that there is provision for a check time interval (XCCH) situated between these series of time intervals. <??>Application : private radio networks. <IMAGE>
