Abstract (en)

[origin: EP0480796A1] The invention relates to a device which makes it possible to obtain electrode biasing voltages for deflecting the electron beam emitted by a cathode of an X-ray tube. <??>The invention lies in the fact that four DC voltages  $+/-V_1$  and  $+/-V_2$  are generated (30, 40) in order to apply them to a mixer circuit (55) in which they are added algebraically by diodes (D1 to D4) to floating-reference pulse voltages  $+/-V_3$  so as to obtain charging voltages  $VS_1$ ,  $VS_2$ ,  $VS'_1$ ,  $VS'_2$  for capacitors C15 and C14, such that:  $VS_1 = V_3 - V_1$ ,  $VS_2 = -V_3 + V_2$ ,  $VS'_1 = -V_3 + V_2$ ,  $VS'_2 = V_3 - V_1$  <IMAGE>
