Abstract (en)

[origin: EP0480820A1] The programmer is provided with a motor for driving a cam unit in both senses. This unit includes a cam (32) cooperating with a lever (250) mounted movably along a travel limited by two stops and extending in a first direction substantially parallel to the direction of motion of the profile of the said cam (32) in order that the said lever (250) comes up against one or the other of the said stops depending on whether the said cam is driven in one sense or in the other, and there is provided at least one mains supply contact (25) opened by the said lever (250) when the latter is up against one of the said stops. The programmer of the invention applies in particular to electric domestic appliances. <IMAGE>
