Abstract (en)

[origin: EP0480873A1] The method consists in manufacturing two electromagnets equipped with their coils, in separately manufacturing a connection block from synthetic material having, on one side, connection pieces equipped with tabs and, on the other side, pins or other means of external coupling, and in shrouding the two electromagnets in a part of the connection block. The method makes it possible to rationalise the fabrication of assemblies of electromagnets for electrovalves having various types of pins. <IMAGE>
