Abstract (en)

[origin: EP0480908A2] A relay, having a magnet system consisting of a yoke and an armature, in which the armature is supported on the yoke, and having a coil, the armature and the yoke engaging by means of a limb into the coil. In the case of such a relay, in order to find the extension with as few air gaps as possible, it is provided that the armature (7) is constructed in an L-shape and is supported by means of its shorter limb (8) on the longer limb (4), which runs on the outside of the coil (2), of the U-shaped yoke (1), which is of integral construction, the shorter limb (3) of the yoke (1) engaging in the interior of the coil (2). <IMAGE>
