Abstract (en)

[origin: EP0481415A1] Removable stacker for an automatic mail sorting system, characterised in that it comprises a stacking surface (1), a movable wall (4) for keeping the documents in position, which wall moves as filling proceeds against the action of a return device, and a hinged flap (8) able to assume a first position in which it is retracted and a second position in which it grips said documents in co-operation with said movable wall (4) during handling of the removable stacker, said flap comprising means for keeping it in the second position against the action of the weight of the stacked documents. <IMAGE>
