Abstract (en)

[origin: EP0481867A1] The textile support for fusible interlining consists of a woven fabric or of a woven-mesh knitted fabric. According to the invention, at least the weft of the woven or weft-knitted fabric is made from synthetic yarns, for example of 35 to 500 dtex composed of fine filaments of less than 1.3 dtex. These weft yarns are preferably textured. <??>The fusible interlining consists of the above-mentioned woven or weft-knitted fabric, on one face of which spots of heat-fusible polymer have been deposited.
