Abstract (en)

[origin: EP0482500A1] A guiding device 1 for guiding, deflecting and/or reversing a material web 2 essentially comprises a block 3 which has a curved surface. The block 3 is segmented, i.e. divided into sections 5A to 5F, and in each section there is a certain number of bores 4A to 4F which are supplied with medium flows at different speed or with different medium quantities. In each of the sections, the predetermined number of bores are interconnected and join a common medium-supply device 8 via a common line 7A, ... 7F. The medium is either compressed air or a fluid.
