Abstract (en)
[origin: EP0483528A1] The invention relates to an insulation glass construction with a spacer (1) and two panes (2, 3) cemented to the spacer, and also an anti-sun foil (4) which is arranged between the panes and can be moved up and down. In order to guarantee the suitability of the insulation glass construction especially for oblique and also horizontal positioning, the insulation glass construction comprises, in addition to a drive device acting in an upward direction on the anti-sun foil (4), also a counteracting device (6, 6') acting in the downward direction on the anti-sun foil.
