Abstract (en)  
[origin: EP0484316A2] A soling part (1) for shoes (2) comprises in the heel-side end region, in particular on or in the heel (3), one or more absorbent zones which, during the relief following loading during natural progressive movement, absorb any adhering water and prevent spraying away. The absorbent zones can contain absorbent elastic material (6, 7) such as open-pored polyurethane elastomer, but they can also be made by bores (11) or cavities in the heel (3), into which ducts (12) open. <IMAGE>
