Abstract (en)
[origin: WO9117801A1] The present invention relates to a golf tee (1) having a yieldable and deformable folding zone (5), whereby a tee (1) is provided which does not break so easily as a common tee. It does not loosen so easily from its position at a smashing out place during a smashing out. A feature according to the present invention is thus the yieldable folding zone (5). The anchoring portion (2) of the tee (1) and the golf ball supporting portion (4) therefore can have an optional appearance. The folding zone (5) can start at a position next to the apex of the tee and end at a position next to its upper part in all embodiments. Hereby the tee is unloaded the risk to break by increased weight tendency and deformation property. The sudden collision by a club blade is now unloaded in a movement owing to the yieldability of the tee.
