Abstract (en)

[origin: EP0484676A1] The invention relates to a profiled rail (1) for floor coverings, in particular for carpets, having pin-type attachment parts (7) which are to be anchored in the floor and engage with a widened head (6) in an undercut longitudinal groove (5) on the underside of the profiled rail. In order to improve a profiled rail in such a way that the installation of the profiled rail is simpler, the longitudinal groove is to have a clear height corresponding to the height of the head on the attachment part. <IMAGE>
