Abstract (en)

[origin: EP0484693A1] The present invention describes an angle structure for joining two flat elements, especially for container covers, having a first (2) flat element, constructed especially as a hollow profile, and a second (7) flat element, onto which an outer wall of the first flat element engages like a flange, an undercut region (20) being constructed on/in the first flat element, into which a clamping profile (10) engages and which forms a clamping retention for the second surface element, with the outer flange of the first flat element. <IMAGE>
