Abstract (en)

[origin: EP0484846A2] The lever device includes a lever arm (5) arranged at at least one adapted seat (9) defined on one of the flaps (3). At least one grip element (13,14b) for engagement members provided on the lever arm is associated with the other one of the flaps. The insertion of the lever arm within the adapted seat thus allows to have high strength characteristics and to not require a surface finish of good aesthetic quality, in view of its partial concealment, as well as to give the boot a neat aesthetic appearance, there being no protruding elements and because of the reduced size. <IMAGE>
