Abstract (en)

[origin: EP0485338A1] Ski equipped with a stopping device or brake, consisting of at least one stopping element (6) articulated on one side edge of the ski (2) and held in an operating position by an elastic means, and of one actuating pedal (7) whose role is to lift the stopping element (6) into a non-operating position when the ski is put on. The actuating pedal (7) and the stopping element (6) are independent of one another such that each of these elements can be mounted at the location which is best adapted to receive it. In particular, the stopping element and the pedal may be mounted on parts of the binding movable relative to each other. <IMAGE>
