Abstract (en)  
The present invention relates to a composite casing for sanitary system taps incorporating a valvular device for controlling the delivery of water, the casing of which is made up from a metal core (11) having a valvular device and delimiting water inlet and outlet conduits, and from a covering or shell (12) in synthetic resin enclosing the metal core. The covering or shell is integral with the metal core through the assembly of the components and the setting up of the tap for its use. <IMAGE>
