Abstract (en)

[origin: EP0485747A1] Drive unit for at least one roller shutter, in particular a Venetian blind-type slatted roller shutter, having an electric motor with motor output shaft (9) and, connected thereto, a reducing gear with drive unit output shaft (14), the two shafts (9, 14) being parallel and offset in a direction (y). In order to provide as compact a unit as possible which additionally allows a standard electric motor to be employed, the invention provides that the gearwheels (10) of the gear be offset in a second direction (x). <IMAGE>
