Abstract (en)

[origin: EP0485901A1] Pressing method for controlling and regulating a press during a juice extraction process, which comprises at least one pressure increase sequence, characterised in that it is based on measuring the flow or the extracted quantity of liquid before, during or after pressing or the partially dried pressed material remaining in the press after pressing and making a comparison with a given value, and using the value, which arises from the difference between the values for the flow or the quantities of liquid extracted and the given values for the flow or the quantities, or the quantity of the possibly partially dried pressed material remaining in the press, in order to begin, continue, interrupt, change or end the method for juice extraction, this method being at least partially programmed. <IMAGE>
