Abstract (en)

[origin: EP0486216A1] There is disclosed a light-sensitive silver halide photographic material improved in light-fastness. The photographic material comprises a support and provided thereon a silver halide emulsion layer containing a dye forming coupler, wherein said silver halide emulsion layer contains a compound having a singlet oxygen-quenching ability with a quenching rate constant k_q of not less than $1 \times 10^8 \text{ M}^{-1} \text{ s}^{-1}$ and a compound different in kind from said compound having a singlet oxygen-quenching ability and having a radical-scavenging ability.
