Abstract (en)
Conventional liquid dishwashing agents are predominantly produced from surfactants with a petrochemical basis and which additionally have the disadvantage of incomplete biodegradability. A liquid, foaming detergent which has all the beneficial properties of conventional dishwashing agents while, at the same time, being well tolerated by skin and very environmentally compatible is now proposed. The surfactant ingredients are predominantly composed of alkyl polyglycosides and anionic surfactant as well as other surfactants.

Abstract (de)
Herkömmliche flüssige Geschirrspülmittel werden überwiegend aus Tensiden petrochemischer Basis hergestellt, die außerdem den Nachteil der unvollständigen biologischen Abbaubarkeit implizieren. Es wird nun ein flüssiges, schäumendes Reinigungsmittel vorgeschlagen, das alle positiven Eigenschaften herkömmlicher Geschirrspülmittel aufweist, bei gleichzeitiger hoher Hautverträglichkeit und Umweltverträglichkeit. Die Tensidbestandteile setzen sich überwiegend aus Alkylpolyglycosiden und Anionensid sowie anderen Tensiden zusammen.
