Abstract (en)

[origin: EP0487378A1] The painting installation comprises an isolator with a movable element, especially a movable conduit (pipe) element for separating two portions of the delivery circuit. <??>According to the invention, the isolator (I1) is connected to an assembly of valves (V1-V8) which are distributed upstream and downstream, which isolator is connected in order to establish the connection with a rinsing-product source (W) and a compressed-air source (A) in order to clean and to purge the said isolator (I1) before each operation of opening the latter. <IMAGE>
