Abstract (en)  
[origin: EP0487449A1] An insert (3) is inserted into a laterally arranged opening (1a) of the basin (1). A control device (4), a transmitter (5) and a solenoid valve (6) are mounted on a baseplate (3b) of the insert (3). These form the control device for contactless control of rinsing. The solenoid valve (6) is connected via flexible lines (11, 12) to a water connection (8) and to a rinsing inlet (10). The insert (3) is withdrawn to inspect or repair the control device (4, 5, 6), and this renders the individual components freely accessible from the front. <IMAGE>
