Abstract (en)

[origin: EP0487981A1] A container is described for infusion solutions or similar medical solutions, having a discharge nozzle (18) which can be sealed by a plug and a screw cap. In order that the container need be manipulated as little as possible in the confined region of the discharge nozzle, in order to withdraw liquid, an aperture is provided which lies opposite the discharge nozzle, relative to the centre of the container, and is permanently sealed by a perforable cap (22). <IMAGE>
