Abstract (en)

A toner resin, which comprises a styrene component, an acrylic acid ester component and/or methacrylic acid ester component, and a divinyl monomer component, wherein the glass transition temperature is 50 to 68 DEG C and the tan delta which is the ratio of the dynamic loss to the dynamic elastic modulus is 0.3 to 0.7 as measured at 200 DEG C, a toner having an excellent fixing property, non-offsetting property, and blocking resistance, and able to be used with a high-temperature high-speed copying machine, is formed from this toner resin.
