Abstract (en)

[origin: EP0488601A1] There is disclosed a silver halide color photographic material having a broad latitude in exposure illuminance with respect to gradation and sensitivity thereof. The photographic material comprises a blue-sensitive silver halide emulsion layer, a green-sensitive silver halide emulsion layer and a red-sensitive silver halide emulsion layer, wherein at least one of said color-sensitive layers is comprised of two or more kinds of iridium-containing silver halide grains having different iridium contents per grain, and at least one kind of the silver halide grains is prepared in the presence of an iridium compound and a compound of a metal selected from metals, other than iridium, belonging to Groups Va, VIa, VIIa and VIII of the periodic table.
