Abstract (en)

[origin: EP0488952A2] With this method and this device for carrying out the method for the collection and/or preparation of materials for reuse, consumers are to be given the incentive to collect materials for reuse. A counting device (9) activates a deformation device (8) when an article-testing device (7) has detected as being good for reuse a collection article introduced into the receiving orifice (4) of a recovery unit (1). When the counting device (9) reaches a predetermined count, a voucher is printed by a printer (10) and issued through a dispensing slot (6). Arranged additionally on the front side (2) of the recovery unit (1) is an advertising surface (3), on which specific products can be advertised by slide projection, video projection, a running tape or light lettering, or information on the articles to be collected can be given. <IMAGE>
