Abstract (en)

A container-dispenser (1) for disposable products such as wipes and the like has a hole (2) for the removal of the products. A closure element (3) in correspondence with the hole (2) includes a fixed portion (4) which surrounds the hole (2) in a generally U-shaped configuration and a movable flap (5) which is intended to cover the hole (2) as a result of the sticking of an adhesive outer portion (6) to the container envelope. The fixed portion (4) and the movable flap (5) are connected by tear lines such as lines of punching (8, 8 min) which tear when the container (1) is first opened, providing proof of any tampering therewith. <IMAGE>
