Abstract (en)
[origin: EP0488975A1] An apparatus for filtering of liquid, preferably water, comprises a housing (10) having a filter (12), a liquid inlet (11), a filtrate outlet (15), a narrow passage (22) through which the liquid flows at high velocity across the filter, and a return conduit (16) by which unfiltered liquid is recirculated to the inlet. According to the invention, the apparatus is provided with an air inlet (18) for supplying air to the return conduit (16), and an air outlet (19) provided at the top portion of the housing for discharging air and foam from the apparatus. <IMAGE>
