Abstract (en)

[origin: EP0489244A1] The invention relates to a device for bolting a two-wing door having a gangway wing (1) and a standing wing (2) which has a spring-loaded bolt engaging into a door frame (6), the bolt possessing an actuating projection, on which a construction part of the gangway wing (1) engages. So that the device is independent of a lock, the actuating projection is to be a stud (19), on which a run-on slope (21) of the gangway wing (1) engages. <IMAGE>
