Abstract (en)
[origin: EP0489311A2] In an electromechanical time switch having a replaceable time dial (2) that is driven by an electric motor in a time-holding fashion and on the circumference of which there are arranged programmable and/or non-programmable cams (6) which operate a fixedly arranged electric switching contact device in accordance with a switching programme, the annularly constructed time dial (2) is axially bounded on one side by a detachable, lockingly fastened cover (3) on the housing (1) of the time switch, which cover is arranged coaxial with the time dial. <IMAGE>
