Abstract (en)

[origin: EP0489606A1] The container is made from foldable material, such as cardboard, formed by folding a cut and scored blank which has, when it is constructed to form a volume, panels determined by free edges formed by cutting and/or scoring lines. It is characterised in that at least two panels (4-6-8-9 and 5-7-12-13) are triangular and, after folding, have to cover at least partially one or more of the panels (1-11-16) having to form adjacent faces of the container, means being provided for keeping the container in constructed and closed form. <IMAGE>
