Abstract (en)

[origin: JPH04272857A] PURPOSE: To obtain a register pin arranged, adjustably in the axial direction, in a groove made in the plate cylinder of a rotary press in which the register can be positioned while being adjusted individually in the axial direction on the plate cylinder. CONSTITUTION: The register pin 11 has a register part 13 and a fixed part 12 having at least two elongated holes 17; 19, 21 shifted each other by 90 deg.. One elongated holes 17; 19 directing in the axial direction are provided for containing fixing means 24; 26 and the other elongated holes 21 is provided for containing an adjusting means 33.
