Abstract (en)  
[origin: EP0490357A1] The pivoting device has at least one pivoting arm (1) which is arranged on at least one support (2). There engages on the pivoting arm at least one brake (7, 9) which is ineffective when pivoted up and secures the pivoting arm (1) against pivoting back. When the pivoting arm (1) is pivoted down, the brake (7, 9) comes into operation so that the pivoting arm (1) cannot fall down unintentionally. As the brake (7, 9) is made inoperational when the pivoting arm (1) is pivoted up, only the dead weight of the pivoting arm (1) has to be pushed up, which even disabled persons can carry out easily. <IMAGE>
