Abstract (en)

[origin: EP0491534A1] An electric light switch (1) comprises a housing (2) for mounting on the wall of a room and serves to control a remote primary source of illumination providing a high level of illumination required for normal activity within the room. The switch housing (2) incorporates a secondary source of illumination (3) providing a low level of illumination enabling fearless repose within the room and the switch (1) includes a contact member (5) for selecting either the primary source or the secondary source (3) as the source of illumination within the room. <IMAGE>
