Abstract (en)

[origin: EP0491579A1] The invention relates to a device for applying a pasty product, particularly for dispensing lipstick. This device comprises a tubular element (3) with slides (4, 5), in which a cup piece (9) which carries the stick (2) can slide. A cylindrical casing (12) is slipped over the tubular element (3) and carries, on the inside, helical grooves (13, 14). The studs (10, 11) of the cup piece (9) traverse the tubular element (3) via the slides (4, 5) of the latter and engage in the helical grooves (13, 14). The cylindrical casing (12) is blocked between a lower stop (21) and an upper stop (19) which are carried by the tubular element (3). The invention consists in having provided a means (101, 102) for taking up play and braking this mechanism and in having interposed it between the tubular element (3) and the assembly E formed by the casing (12) and its outer sleeve (15). <IMAGE>
