Abstract (en)
[origin: EP0491587A1] Hollow charge, comprising essentially a layer of compressible material (15) injected between the cylindrical casing (5) and the explosive charge (1), in order to prevent the occurrence of plays or of internal stresses in response to changes in temperature or to shocks. An elastic mounting can also be provided in the axial direction between the projectile (4) and the cylindrical casing (5). <IMAGE>
