Abstract (en)

[origin: EP0491628A2] Lipo peptides inducing cytotoxic lymphocytes, comprising a peptide part which has approximately between 10 and 40 amino acids and comprising at least one antigen determinant. The lipo peptides also comprise one or more chains derived from fatty acids and one or more modified steroid groups. The said lipo peptides can be employed for immunising the human or animal body against pathogenic agents such as viruses or parasites. The peptide part can be especially a fragment of the protein coded by the ENV gene of the HIVs, in particular the 312-327 fragment or the 302-336 fragment of this protein.
