Abstract (en)

[origin: WO9104203A1] A complete container for workpieces of varying lengths consists of two container components (1, 1') which are identical in shape and design. Each component (1, 1') takes the form of a plastic or metal half-section with a substantially flat bottom (2, 2') and an edge (3, 3') open at the top on one side. Guideways for clamping strips (6, 9) are formed at the rear and bottom (2, 2') of the container components (1, 1'). The clamping strips (6, 9) are placed around the two container components (1, 1') surrounding the workpieces (10) at the front and tightened. A third clamping strip (11) is tightened transversely over the workpieces (19) clamped between the two container components (1, 1').
