Abstract (en)
[origin: EP0492038A2] In an electromagnetic contactor, an electromagnet having an exciting coil, a contact apparatus driven for switching by the electromagnet, a fixed terminal board having fixed contacts of the contact apparatus at one end and having a terminal screw engaging portion at other end, and a coil terminal board having a lead wire of the exciting coil connected to one end and having a terminal screw engaging portion at other end are incorporated in a case. The fixed terminal board and the coil terminal board are arranged at the terminal screw engaging side horizontally on the upper surface of the case, and plate springs are installed on the upper surface of the fixed terminal board and the coil terminal board. Or at least one of the fixed terminal board and the coil terminal board is of floating structure so that the terminal height is moved upwards and downwards to other terminal height. <IMAGE>
